

# Empirical Mode Decomposition Apparatus, Method, and Article Of Manufacture for Analyzing Biological Signals and Performing Curve Fitting

---

Case Number: GSC- 13817-3

Patent Number: 6,381,559

Patent Exp. Date: 6/10/2017

## DESCRIPTION

This technology is a biological signal analyzing method which involves utilizing intrinsic mode function. The method involves inputting a signal and recursively sifting the signal through empirical mode decomposition to extract an intrinsic mode function indicative of an intrinsic oscillatory mode. The intrinsic mode function is utilized as a basis to interpret the signal by displaying the intrinsic mode function and by storing and transmitting the function.

## FEATURES AND BENEFITS

- This method eliminates undesired functions, thereby generating a filtered signal from which the method can perform a curving fitting process to arrive at an analytic function, which accurately represents the physically important components of the original signal.

## APPLICATIONS

- Geometrical Signal Processing
- Biological Signal Processing
- Geophysical Signal Processing
